# Study Design

- 12 Participants (5 males and 7 females; aged 20 - 27)
- 2 different ranking animated visualizations
- 2 visual foreshadowing settings (with and without)

# Study Design

- A **survey** consists of 12 questions (referenced from previous study [1])
- A semi-structured **interview** for collecting feedback
- 20 minutes to complete the whole study

# Study Results

- **Average ratings** of the user engagement survey questions (7-point Likert scale)

Assessment	Foreshadowing	Mean	SD
Enjoyment	Without	4.13	0.61
	With	6.54	0.54
Focused Attention	Without	3.71	1.03
	With	6.17	0.72
Cognitive Involvement	Without	4.50	1.04
	With	6.04	0.58

- **Interview feedback**

*“The additional visual effects are useful and make the animation more like a story. Otherwise, I don’t know where to look at and forget almost all the changes.”*

# Conclusion

- Visual Foreshadowing (explicit and implicit)
- A proof-of-concept animated visualization authoring tool
- Initial evaluation on improving engagement for animated visualization

# Future work

- **Future extensions** of visual foreshadowing
  - Visual effects
  - Animated visualization types

# Future work

- **Future extensions** of visual foreshadowing

- **In-depth Investigation** on Effectiveness
  - Which is the most effective visual foreshadowing design?
  - Which is the most effective **setting** (in terms of timing and duration)?
  - ...
